

LEBENS LAUF

 Geburtsdaten 06.09.1999 in Indien

MAHESH CHANDA

DevOps & Site Reliability Engineer

-  Address Frisco, TX, USA (Relocating to Germany)
-  Mobile +1 (817) 319-0147 (Available via WhatsApp)
-  E-Mail chandamaheshh@gmail.com
-  LinkedIn www.linkedin.com/in/mahesh-chandaa69

Work permit: Eligible for the EU Blue Card (IT Shortage Occupation • Anabin H+)

PROFESSIONAL EXPERIENCE

seit 09/2025

Salesforce (USA) (contract worker)

AWS DevOps Engineer

Technologies: AWS (EKS, VPC, EC2, ELK, S3, EBS, IAM, ELB), Terraform, Ansible, Jenkins, Argo CD, Docker, Kubernetes, Splunk, Dynatrace.

- Designed and provisioned resilient, multi-region AWS infrastructure (EKS, VPC, EC2, ELB, S3, EBS) supporting high-availability production workloads for enterprise SaaS customers.
- Automated cloud provisioning and configuration management with Terraform and Ansible, cutting manual operational effort (toil) by 70% and standardizing environments across teams.
- Built and maintained CI/CD pipelines in Jenkins, TeamCity, and Argo CD, enabling automated version control, secure rollback procedures, and programmatic quality gates for every release.
- Containerized microservices with Docker and operated large-scale Kubernetes (EKS) clusters using Helm charts and GitOps workflows, improving deployment consistency and reducing rollout errors.
- Monitored system health via CloudWatch, Dynatrace, and the ELK Stack as part of an on-call rotation, shortening Mean Time to Resolution (MTTR) for production incidents.
- Strengthened platform security through granular AWS IAM roles, VPC peering policies, network security groups, and centralized secrets management with AWS Secrets Manager.
- Analyzed application and infrastructure logs in Splunk to proactively identify capacity bottlenecks and recurring failure patterns before they impacted customers.
- Partnered with cross-functional product and security teams to document infrastructure architecture and runbooks, improving onboarding speed for new engineers and audit readiness.

01/2024 – 09/2025

TIAA (USA) (contract worker)

Site Reliability Engineer (SRE)

Technologies: AWS, Terraform, Ansible, GitHub Actions, Docker, Kubernetes, Prometheus, Grafana, Splunk, ELK Stack, Jira, LDAP.

- Defined and tracked SLIs, SLOs, and SLAs and managed error budgets to sustain 99.99% platform availability across critical financial services systems.
- Led incident management for P1/P2 production incidents and authored blameless post-mortems that fed directly into engineering roadmaps, reducing repeat incidents.
- Architected zero-downtime deployment pipelines enabling agile microservice releases across multi-stage sandbox and production environments.
- Built reusable, self-service platform engineering frameworks that reduced operational toil and decreased cross-team dependency on manual infrastructure requests.

- Developed custom Django REST Framework automation scripts for AWS EC2 test nodes, increasing verification throughput for release validation.
- Orchestrated core services with Docker and managed service discovery and auto-scaling across multi-tenant AWS EKS clusters.
- Built Prometheus and Grafana dashboards for real-time service health and capacity trends, giving engineering and business stakeholders shared visibility into system reliability.
- Administered LDAP-based access controls and tracked remediation work through Jira, ensuring least-privilege access and auditable change management across the SRE team.

01/2023 – 12/2023

Southern Arkansas University (USA)

Student Research Assistant (Wissenschaftliche Hilfskraft)

- Tutored students in relational database fundamentals, including ER modeling, schema normalization, and complex SQL query design.
- Maintained containerized PostgreSQL/MySQL lab environments to ensure reliable, on-demand access to preconfigured database instances.
- Automated assignment grading using custom Python scripts (unittest, pytest), reducing grading time by 30%.
- Led tutorial groups on Python fundamentals (OOP, file I/O) and data manipulation with the Pandas library.
- Used Git for version control of lab materials and grading scripts, establishing a reproducible workflow that faculty reused across subsequent semesters.
- Wrote setup and troubleshooting documentation for database lab environments, reducing repeat support requests from students.
- Automated nightly backup and restore routines for shared lab databases, improving environment reliability ahead of grading deadlines.
- Collaborated with faculty to design assignment rubrics and test cases, aligning automated grading criteria with course learning outcomes.

05/2021 – 07/2022

LG Electronics (Pune, India)

Build & Release Engineer

Technologies: Azure (VMs, AKS, Key Vault, App Gateway), Jenkins, Azure DevOps, Terraform, Ansible, Docker, Kubernetes, SonarQube, Snyk.

- Built secure end-to-end CI/CD pipelines using Azure DevOps, Jenkins, and GitHub Actions, reducing release cycle times by 60%.
- Provisioned Azure infrastructure as code (VMs, storage accounts, AKS) using Terraform and ARM templates.
- Created Helm charts supporting canary and blue/green deployment models for mission-critical payment APIs.
- Integrated SonarQube and Snyk (SCA) into active build pipelines for early identification of static code and dependency vulnerabilities.
- Automated Linux/Windows Server provisioning with Ansible playbooks and declarative Jenkins Groovy pipelines.
- Centralized application secrets and certificates in Azure Key Vault and configured Azure App Gateway for secure, load-balanced ingress traffic.
- Coordinated release schedules and rollback plans with QA and product teams, maintaining zero-downtime deployments during peak release windows.
- Containerized legacy build tooling with Docker and migrated it onto AKS, cutting environment setup time for new build agents from days to hours.

EDUCATION

08/2022 – 05/2024	Southern Arkansas University, USA (Anabin H+) Master of Science (M.Sc.) in Computer and Information Science
08/2017 – 05/2021	Bharath University, India (Anabin H+) Bachelor of Science (B.Sc.) in Electronics and Communications Engineering

CERTIFICATIONS

AWS Certified Developer – Associate
Azure DevOps Engineer Expert

KNOWLEDGE AND INTERESTS

Programming	Python, Bash/Shell, PowerShell, Groovy, Java, JavaScript
SRE Concepts	SLIs/SLOs/SLAs, Error Budgets, Incident Management, Blameless Post-Mortems,
Cloud Platforms	AWS (EC2, S3, RDS, EKS, ECS, IAM, Lambda), Azure (VMs, AKS), GCP
Security	AWS IAM, Azure AD, HashiCorp Vault, SonarQube, Snyk
Container & CI/CD	Docker, Kubernetes, Helm, ArgoCD, Jenkins, GitHub Actions, Azure DevOps
Infrastructure as Code	Terraform, AWS CloudFormation, Azure ARM Templates, Ansible, Helm
Monitoring & Log	Prometheus, Grafana, ELK Stack, Splunk, Dynatrace, CloudWatch
Languages	English (Fluent) German (Beginner/ A1 in progress) Telugu (Native)
